Analysis and insights into the trends, forces and factors shaping the world and your wealth

Taking control of health care in retirement
Dear Reader,

Planning for a happy and healthy retirement goes beyond just saving and investing; it requires you to navigate a progressively complex landscape and make informed decisions along the way. One of the most critical decisions to make is how you will pay for health care once you’ve left the workforce.

What once was a matter of a few years, life in retirement now can span decades thanks to advances in medical treatments and technologies that enable us to live longer. While this is good news, determining the cost of health care over an increasingly longer span of time can be a challenge—and one that most people aren’t sure how to tackle.

To help you better plan ahead, we’ve devoted this edition of RBC Wealth Insights to the important topic of health care in retirement.

This comprehensive paper examines the current health care landscape and considers how that landscape might change in the future. Our goals are to educate you on a range of health care topics, enable you to gain a better understanding of the real cost of care and provide you with specific actionable ideas that you can implement as you plan for your retirement future.

At RBC Wealth Management, we are devoted to bringing clarity and confidence to your everyday lives through meaningful planning combined with expert guidance along the way. Talk to your financial advisor about your RBC WealthPlan and the important role health care plays in your financial future.

Taking control of health care in retirement

The fact is, retirement planning and health care are closely linked. The choices you make today will have an impact on how you live your retirement years. These choices will help determine your lifestyle, how you'll fund your care, the quality of that care and the downstream impacts on your family and legacy.

Taking the time now to understand the issues will better equip you for the future. This report will help you gain perspective, understand your options and define the actionable ideas that will deliver confidence for your journey.

RBC survey: Cost concerns for the future

As part of an ongoing commitment to research, RBC Wealth Management commissioned a survey to shed light on perceptions of health care in retirement. The study included over 1,000 individuals across diverse demographic categories and asked them to share their level of preparation and expectations for the future. This included those still in primary careers as well as those already in retirement.

Across all categories, one major theme emerged: Respondents are overwhelmingly concerned for the future. While for most this concern manifested itself as worry about affording the cost of care, several additional questions about the future also emerged.
A few key points stood out from our research

**Concern over the cost of care is nearly universal**

An overwhelming majority of respondents indicated worries over their ability to fund health care expenses in retirement.

Although this concern spanned all demographic categories, women and the college-educated investors were more likely to be concerned.

**Few are acting on their concerns**

Despite this anxiety, only about half of our survey group have taken the time to factor health care expenses into their plan.

Among the group that hasn't planned for health expenses, more than half say they have no financial plan for retirement at all.

**Of those taking action, unease persists**

Of the group that took action to factor health care expenses into their plan, half believed they underestimated the true cost.

Due to longevity and prevalence of chronic diseases like dementia, women need to plan to spend more on health care as they age.

**Overall costs are being underestimated**

Investors in our survey anticipate relatively modest annual out-of-pocket health care spending in retirement.

In reality, experts estimate that at age 65, annual spend on health care for a healthy couple is close to $5,700 per person ($11,400 for a married couple).
Examining key trends

One of the most powerful influences in today’s health care landscape is generational change. The older Baby Boomers have already begun to leave the workforce and tap into the health care system via Medicare. As this continues, the sheer size of the 75 million strong Boomer generation¹ will tax the health care system and serve as a catalyst for innovation and economic growth, transforming how people age and how care is provided for generations to come.

Here are a few noteworthy trends:

**Taxing entitlements**

The surge of enrollees will stress the Medicare trust fund, which is expected to be depleted by 2029 when Medicare-eligible Americans peak at 20 percent of the U.S. population.² This will create a shortfall that will need to be addressed, likely through higher taxes, increases to the enrollment age or further means-testing. The largest changes could be seen in Medicare premiums impacting Social Security benefits—likely disproportionally affecting higher-income earners.

**Health professional shortage**

As Boomers exit the workforce to enjoy retirement, they will be leaving a significant gap in the number of physicians and care providers in the health care system. This will occur at precisely the same time age-based demand for care is growing. An increased demand for geriatric and general physician care will lead the way. Addressing this shortage will require new and expanded roles and innovative ways to deliver care.

**Silver economy**

The “silver economy,” defined as age 50-plus, is expected to account for more than half of U.S. economic activity by 2032.³ Increased demand will fuel growth benefitting the health care sector, including pharmaceutical, biotech and senior care services. The health care system will also see a shift from acute to chronic care. Companies that focus on diseases like cancer, osteoporosis, arthritis, dementia and Alzheimer’s are expected to grow. Demand will also rise for products and services for aging eyes, ears and teeth as well as incontinence.
The age of innovation

With this demographic shift, the demand for improvements and innovation in medicine and health care is expected to grow exponentially. Medical and care advancements are expected to shift from traditional and acute services to sustaining and therapeutic care. Technology will be center stage, enabling new ways to live independently, improve mobility, increase engagement, and exercise the mind and body.

Some examples include:

</tr>
</tbody>
</table>

Aging in place

By 2030, all Baby Boomers will be older than age 65. Most of these seniors will own their own home and expect to “age in place.” This will be possible for most with the assistance of family and in-home care providers, up to a certain point, when physical and/or mental capacity diminish. The aging population will continue to drive demand for alternative living options, with impacts on the housing market, increasing demand for assisted living, skilled service facilities, home sharing and other hybrid options.

Increased use of analytics

As models for care evolve and patient pools age, health systems will increasingly rely on group data. Looking across electronic health records will allow providers to identify risk factors and implement preventive treatments. Group data can help predict which elderly people will need what kind of care and when; help monitor an individual's health to catch problematic patterns before they develop into a major health issue; and assist in identifying better ways to protect vulnerable seniors from financial fraud.
Projecting the real cost of care

With seniors more active than ever and lives stretching longer, maintaining good health as you age is a top priority. Yet as the cost of care continues to rise, growing expenses bring significant risk.

Know the cost

Increases to the cost of care have led to some staggering numbers across a full retirement period, creating a price tag of over $400,000 for the future cost of care for an average 65-year-old couple in retirement.

This increase in cost is largely due to greater demand driven by longevity and advances in treatment and technology. For example, so-called maintenance procedures like joint replacement and cataract surgery are increasingly common, but carry significant price tags as they impact greater numbers of Baby Boomers.

Expenses like these are directly impacting Medicare and private insurance, which share the burden with individuals through escalating premiums, copays and deductibles.

These cost increases are particularly challenging for women, who face higher lifetime care costs due to a life expectancy that is two-plus years longer than men. These additional years are significant, resulting in costs that are typically one third higher than for men overall.

Wage and Social Security cost of living adjustments (COLAs) have consistently lagged behind the rise in health care costs, creating a need to plan and fund health care as a separate goal. With the cost of premiums growing at three and four times faster than wage and COLA increases, it is important that the rate of inflation used for your health care goal properly reflects expected health care inflation of at least 5 percent.

Your share of the cost

The burden of paying for health care is falling increasingly on the individual through cost sharing. Not only have premiums skyrocketed, but deductibles, copays and out-of-pocket costs are also on the rise.

Even factoring in Medicare coverage, experts estimate that by age 75 it is likely your health care expenditures will amount to 15 percent of your overall spending—nearly double what you spent during your working life.

Medicare cost gap

Medicare covers less than 2/3 of health care expenses in retirement.8

Covering your share

Over half of your total Social Security benefit is needed to fund care. This percentage is expected to grow.9

Total cost of care

Far from a comprehensive solution, Medicare has significant gaps, limits, and increasingly higher premiums and copays. This requires supplemental insurance to help fill the void and provide coverage for additional items like dental care, hearing aids and vision.

These factors combine to make health care likely your second highest expense category in retirement, trailing only housing. This sobering reality makes planning ahead and properly projecting the cost of care using a higher growth rate a crucial part of your overall wealth plan.

Take action:

Discuss the impact of health care expenses with your financial advisor, and model costs into your wealth plan

Ask to include health care expenses as a separate category in your plan, with an inflation rate of at least 5 percent

Monitor and review your plan over time, reviewing it at least annually
Getting a head start: The age advantage

As the total cost of health care continues to escalate, it is increasingly important to begin planning for these costs early in your working life. For younger savers, time and smart choices provide a healthy head start.

**Exponential expense growth**

The rise in the cost of care as you age is pronounced at each stage along the way. This can be discouraging for those in the middle of their working life, as expense projections compound into some truly daunting numbers.

**Average annual spending on health care for a healthy couple increases dramatically as you age.**

![Graph showing average annual spending on health care for a healthy couple increases dramatically as you age.](Image)

<table>

</tbody>
</table>

**Your most valuable asset—time**

For younger savers time is truly on your side, as your human capital from now until retirement represents your most valuable asset in addressing care and expense concerns for the future.

By taking a long-term planning view and being strategic, you can invest and grow assets, avoid costly missteps, and help drive outcomes for the future.

**Benefits that matter**

Today’s benefit packages include a variety of powerful resources that can bolster your physical and financial fitness and build a strong base for the future.

In addition to traditional benefits such as retirement savings and medical benefits, more employers are offering employees expanded options, including accident and critical illness coverage, life insurance, and group legal plans. With an increased focus on managing health care costs, employers are also offering wellness programs that address physical and emotional well-being, and in some cases offer incentives to promote healthy behavior changes.

**Choosing the right health care plan**

The challenge of affordability remains a top issue for most Americans. For those still in their working years, many have health care benefits through their employer, often with important annual elections to make. Most employers offer both a traditional higher-cost, low deductible option and a lower-cost high deductible option. Understanding the impact and overall cost of each option often depends on your family and health situation. Many employers have tools to help evaluate these options and make a more informed decision.

If you and your family are not heavy consumers of health services, consider a high deductible health care plan that provides the added benefit of the companion Health Savings Account. This tax-advantaged savings account can serve as an invaluable tool in building a tax-efficient nest egg for future health care costs.

**Invest in a Roth 401(k)**

If your employer offers a Roth option for 401(k) savings, you should consider the benefits. Rather than deferring taxes on assets, a Roth allows the holder tax-free withdrawals of assets in retirement. For younger workers the tax savings on compounding returns can be significant. In addition, using tax-free withdrawals from your Roth 401(k) or IRA will help reduce your taxable income used in determining Medicare premiums.

**Life and disability coverage**

Protecting your human capital, the present value of your future wages, becomes an important factor as you build wealth and start a family. An early death or disability can be devastating to families who are unprotected. One in four of today’s 20-year-olds will become disabled before they retire. If working-age adults, especially those with specialized skills (physicians, pilots, nurses, athletes), a disability can be catastrophic, interrupting your paycheck and permanently altering your long-term wealth. Employer-provided group life and disability insurance options are often a smart choice in your younger years.

**Important legal matters**

Heightened privacy concerns make it nearly impossible to help a loved one who is incapacitated or dealing with an unexpected death without proper legal documents such as a health care directive, durable power of attorney and a will. Even young adults still on their parents’ health care plan should have a health care directive starting at age 18. Young adults with simple estates and young families just starting out can often benefit from employer-provided legal services to establish these basic legal documents.
Health Savings Accounts: Strategic savings

Health Savings Accounts (HSAs) offer a unique, tax-free method to save and grow assets to fund the cost of care in the future. Getting the most out of this benefit requires an early start and disciplined investing over time.

HSA basics

A powerful tool
Many employers offer HSAs for employees who select a high-deductible health care plan. These accounts offer a powerful method to invest continually and strategically grow assets to fund health care expenses in the future.

Triple tax benefit
HSAs offer an incredibly tax-efficient method to build reserves by delivering a rare “triple tax benefit.”

- Contributions are made on a pretax basis, potentially reducing current taxable income
- Investments grow tax-free for qualifying withdrawals for health care
- Withdrawals for qualified health care expenses are made tax-free

A long-term approach
While many employees use these accounts to fund their current-year expenses, their real value comes as an investment vehicle for the future.

Unlike flexible spending accounts, HSAs permit owners to carry balances across calendar years and invest the assets. By paying for current health care expenses out-of-pocket instead, investors are able to invest and grow balances, building significant resources for the future.

By consistently contributing the maximum annual amount, and investing the balance for future health care costs, one can accumulate a nice tax-free reserve to fund future health care costs. For example, an investment of just $100 per month over 20 years can turn $24,000 into over $56,000 (assumes a 5.5 percent rate of return).

Limits and restrictions
HSAs have contribution limits that are periodically adjusted by the IRS. For 2019, you are able to contribute up to $3,500 for an individual or $7,000 for a family. Like most retirement accounts, there is also a catch-up contribution. Individuals age 55 and older can contribute an additional $1,000, putting the total family contributions at $8,000 for families with one member age 55 and older.1

As Medicare is not considered a high deductible plan, qualified contributions end with Medicare enrollment. Couples with an age difference can continue to contribute to an HSA as long as one spouse is still HSA eligible and not enrolled in Medicare.

Funding your HSA

Salary deferral
Contributions to your account may be made by pretax salary deferral. This can be set up during your annual enrollment period as a simple way to begin to invest pretax dollars.

Direct contributions
Additional and ongoing contributions may be made at any time outside of salary deferral and in most cases may be deducted from taxable income.

Employee incentives
Many employers offer incentives in the form of direct payments to an HSA to encourage participation in health and wellness programming.

IRA rollover
Your account may also be funded via a one-time tax-free rollover from an IRA. The amount of the rollover is limited by annual contribution limits, but this can serve as an effective way to jump-start investing.
HSA qualifying expenses
The range of qualifying medical expenses is quite broad and includes most common health care costs. Additionally, funds may be used for insurance deductibles and premiums, dental and vision care, and even some surprising options like acupuncture and weight loss programs.

When taking distributions from your HSA account to fund care, qualifying withdrawals are 100% tax-free. This includes both the initial contribution and any growth.

The list of qualifying expenses is expansive and includes:

| Medical Insurance premiums while unemployed | Doctor’s visits |
| Hospital services | Preventive care |
| Some long-term care insurance | Eye exams, glasses or contact lenses |
| Dental care | Hearing aids |
| Medical devices | Home care |
| Mental health services | Smoking cessation |

Dependents
HSA account balances may be used to fund care for a spouse and/or dependent children. Expenses are allowed for anyone who is eligible to be listed as a dependent on the primary account holder’s tax return. Qualified medical expenses for your spouse and dependents you claim on your tax return (assuming they are also covered by your health plan) are eligible for tax-free distribution treatment. It is important to note that even though a dependent is eligible to be covered under your high deductible health plan, they may not be eligible for tax-free distributions from your HSA if they claim themselves as a dependent on their own tax return.

Timing of payments
All qualifying expenses are eligible so long as the expenses occur after establishing the account. The balance in your account does not have to be large enough to cover the expense at the time it was incurred. In this manner a hospitalization or other large expense can be reimbursed after the fact if an account balance is run to zero but is still being funded.

Age 65 and beyond
Following Medicare enrollment, you are no longer eligible to contribute to an HSA, but may continue to fund your care with HSA dollars, including paying for long-term care and Medicare premiums.

For added flexibility, seniors are allowed withdrawals from their account for nonqualifying expenses after age 65. These are available without a penalty but will trigger normal income tax.

Unused balance
If an account holder passes away prior to exhausting the balance in their HSA, the surviving spouse is eligible to inherit the account. They may continue to use the balance of the account with the same benefits and restrictions as the account holder. However, if passed on to a nonspousal beneficiary, the benefits will be subject to tax.

Catching up after a late start
Even with a late start, a 50-year-old can build a meaningful reserve within an HSA prior to Medicare enrollment.

When the maximum amount is invested each year, balances can grow to over $200,000 in the 15 years prior to Medicare eligibility.

\[
\begin{align*}
HSA \text{ balance at age } 50 & \quad + \\
\text{Maximum contributions} & \quad + \\
($7,000 \text{ annually}) & \quad + \\
\text{Catch-up contributions} & \quad + \\
\text{beginning at age 55} & \quad + \\
($1,000 \text{ annually}) & \\
\text{Investment growth} & \\
\text{=} & \\
$200,000 & \\
\text{Balance at age 65} & \\
\end{align*}
\]

This projection is helped by investment growth of 5.5%.

Take action:
- Review your benefit elections annually, using online tools to project costs
- Consider saving in an HSA and systematically saving the maximum contribution over time to build flexibility for the future
- Leverage the power of time to bolster your resources across all your employee benefits
Triaging your life expectancy

One of the more important projections for your plan is the length of your retirement period. While this requires an estimate, attempting to quantify a realistic number is important.

Life expectancy

Actuarial tables can offer guidance to help inform planning for the length of your post-working life; however, these measures can sometimes be misleading. While current life expectancy statistics indicate that men can expect to live to 76 and women to 81, those numbers are taken from birth and increase as you age.

Said another way, the longer you live, the longer your life expectancy. This means that statistically, a man celebrating his 65th birthday can expect to surpass age 87 and a similarly aged woman, age 90.

Joint longevity

Another component that is frequently missed is the concept of joint longevity. While a 65-year-old may have only a 22 percent likelihood of reaching age 90, a similarly aged couple has a 47 percent chance one spouse will reach that milestone and a 20 percent chance that one will live past age 95.13

This means that planning for the future should be structured to support various first-to-die scenarios and the unique considerations inherent in each of them. This should include a survivor plan that addresses care and housing preferences, which is typically overlooked in the planning process. Another best practice is to revisit life projections as you reach milestone birthdays to ensure you are adjusting and using accurate numbers.

Your health legacy

Family history and even racial and ethnic factors can predispose us to a variety of health outcomes. This makes connecting with family members to understand the health history of previous generations a crucial component to early detection, preventive measures and risk management.

Your doctors can assess your risk factors and help you decide what is actionable, but a clear grasp of the genetic hand you were dealt can help inform their approach.

Gender differences

Several gender-related factors that are unique to women will impact not only the length of their retirement, but also the need to plan individually for their care in later years. On average a woman is at least two years younger than her male spouse, adding to the life expectancy gap for couples and extending their joint longevity by five-plus years.

Because end-of-life care is more expensive and women are typically the survivor, increased longevity has a disproportionate impact on them. Due to this “survivor factor,” not only are they more likely to experience a long-term care event, but the length of stay is typically longer, adding to the overall cost of care. Women are also at increased risk of dementia and Alzheimer’s requiring memory care, which further contributes to this increased cost.

As women are often the caregivers to their male spouse and then widowed prior to their decline, it is important to address specific care preferences and to include these costs in your health care planning. Having been caregivers, women are also more sensitive to becoming a burden to their family in late-stage life.

Take action:

- Use your health history, including your gender, family and lifestyle, to inform projected life expectancy
- Consider joint longevity when building a plan and budgeting for the future
- Model multiple scenarios, and include a survivor plan that addresses the needs of the surviving spouse
Planning for the unexpected

Maintaining your independence for as long as possible remains a top priority for most Americans. While it may be unsettling to consider a long-term care event, it is increasingly a reality for many Americans.

Planning for the unexpected

With so many unknowns about potential care needs in the future, it can be easy to backburner planning. This can be a costly mistake, as proactive choices now can protect your health and finances in the future.

Understanding the progression and funding of care as you age is an important component of a plan for the future. While it may be disconcerting to consider a care event, a failure to do so can be exponentially worse, placing assets at risk and an unfair burden upon heirs and loved ones.

Home care

Often in-home care is the first option. Today about 80% of this care is delivered by family members or nonprofits. This model may bring added flexibility and help managing expenses, especially early on in a progression of care.

A 2015 study reports that over 43 million Americans served as unpaid family caregivers in the preceding 12 months. Statistics show that 60 percent of these caregivers were women with a median age of 49.

While more cost-effective than institutional care, home health care can raise further concerns. In addition to limitations in medical training, providing care can present family dynamic challenges, impact careers, stress relationships and lay an emotional burden on caregivers.

There are also impacts on the care receiver. For many, the thought of becoming a burden on family in their later years is unsettling.

Hybrid options

Several alternatives have emerged, offering hybrid services that blur the lines between home care and nursing homes. These include a flexible array of offerings like skilled nursing visits, short-term nursing home stays for acute care, independent living and assisted living.

The key with a hybrid plan is active case management, including understanding the needs of the care receiver and finding a cost-effective method for delivering their care.

Nursing home care

For many, the thought of a long-term care event brings to mind a prolonged stay in a skilled nursing facility. This residential option offers patients health and personal care delivered in a medical setting by licensed nurses and support staff. This high-touch model comes at a significant expense, however, and long-term stays are not funded by Medicare.

Funding options

Self-funding: Self-funding long-term care may be an option. The crucial component with this option is to fully understand the potential costs, the potential risks to your other goals and the impact on your family. Estate planning solutions can help mitigate some of the risks, but the time to address issues is long before a care event arises.

Traditional or hybrid insurance: Another option may be to purchase an insurance policy or annuity rider. These can help fund your care and protect assets, but costs vary and this may represent an expensive choice depending on your age and health.

Medicaid: The federal government offers Medicaid as a safety net for those with fewer assets and few other options, making Medicaid a last resort for most individuals.

Decision making

Another proactive step is to determine your advanced care wishes. This includes identifying who should make medical and financial decisions for you when you are no longer able to do so. This requires legally establishing a health care directive and a power of attorney. These documents provide direction on who will make these decisions, in addition to when and under what circumstances these decisions will be made. Ensure these documents are reviewed on a regular basis and kept current.

Take action:

Understand your options, and build a care plan before an event occurs

Carefully consider the impacts of your decision beyond finances, to include family dynamics, level of care and quality of life

Be proactive in addressing financial risks and your potential incapacitation
Medicare basics

Medicare coverage can be a confusing topic with an alphabet soup of options. Understanding Medicare’s coverage, limits and gaps is crucial to managing costs at age 65 and beyond.

Medicare basics

The federal Medicare program represents an important resource to help manage care for Americans age 65 and over. Yet the program is not all-inclusive and contains many cost-sharing provisions such as premiums, deductibles and copays. These can lead to large out-of-pocket surprises for those unfamiliar with the program’s structure and limits. Supplemental insurance can help, but weighing your options requires first understanding the costs and gaps of traditional Medicare (A and B).

Coverage, costs and key gaps of traditional Medicare

Part A covers short-term hospitalization, hospice and some home care
- Required for age 65 and over
- Spending cap: None
- Premiums: None
- Coverage: Limited to 90–150 days per benefit period
- Deductible: $1,340
- Copay: 20 percent of the cost of services

Part B covers preventive care for doctor’s visits and outpatient care
- Premiums: $134–$428 per month (depending on income)
- Deductible: $183/year
- Copay: Typically 20 percent of the cost of services

Gaps in Part A and Part B
- Prolonged hospitalization and long-term care
- Prescription drugs
- Dental care and dentures
- Hearing and vision coverage

Your share of costs

Average annual out-of-pocket expenses for a couple

- Uncertainties (health care inflation variability, Medicare solvency issues)
- Vision, dental and hearing
- Medigap Plan G and Part B deductible (G covers Part A and P co-pays and the Part A deductible)
- Part D premiums and prescription out-of-pocket costs (may vary widely)
- Part B (doctors, tests and outpatient hospital insurance)

Coverage, costs and key gaps of traditional Medicare

Bridging the gap: Retiring before 65

When retirement comes early or is unexpected, it raises additional issues to consider. With corporate downsizing, business transitions and other factors, this is increasingly a reality for many older workers.

- 60% Leave the workforce earlier than planned
- 61% Cite health as the reason for retirement

When retirement comes early, bridging the gap between employer care and Medicare is important.

Several options may be a fit:

Transition to your spouse’s plan
If available, your likely least expensive option is to transition to your spouse’s employer-sponsored plan. Plans generally allow changes outside of open enrollment for a variety of circumstances such as job loss.

COBRA benefits
COBRA coverage allows you to stay on your existing plan for up to 18 months following your last day of work.

This can be expensive, however, as you’ll pay the entire premium (including the employer portion). This can lead to rates that may be four times higher than you are used to paying.

Affordable Care Act (ACA) exchange plans
Depending on your household income, plans on the ACA exchange may be subsidized, which can lead to more cost-effective options, albeit with smaller provider networks that can limit your flexibility.

Private health insurance
Some retirees opt for private insurance, seeking flexibility in deductibles, provider networks and other factors. The benefit here is the ability to find a plan that works for you, but costs and availability can vary greatly.
**Medicare gaps: Which path will you take?**

With limits to the scope of traditional Medicare, enrollment in supplemental insurance has become more popular than ever. By understanding the role private insurance may play, you can select the coverage that helps you manage costs, coverage and care as you age. Understanding the choices includes knowledge of two specific paths to coverage.

### Growth in Medicare premiums

Equally important as understanding the scope of Medicare and coverage gaps is planning for premium expenses. Sparked by a dramatic rise in enrollees and associated expenses, Medicare premiums continue to rise faster than Social Security’s cost-of-living adjustment (COLA). While many existing enrollees are protected from this scenario through the “hold harmless provision,” others like future filers and high income earners will bear the brunt of increased costs for the program.

### IRMAA: Paying a premium for your premiums

Higher-income individuals pay significantly more for Medicare Parts B and D than other enrollees, due to Income-Related Monthly Adjustment Amounts (IRMAA). These adjustments can lead to an additional $370 a month per person in premiums for the exact same coverage. Eligibility is determined annually based on the Modified Adjusted Gross Income reported on your tax return (two years trailing). This makes managing income, including qualified distributions from 401(k)s and IRAs from age 63 on, important as even one dollar above a new threshold triggers the higher rates.

### Steep rise in premiums for higher-income earners

#### Take action:

Understand your options and gaps within Medicare and the impact those may have on your care, and review annually

- Model health care costs into your retirement plan, including common scenarios such as a knee or hip replacement, chronic illness, and a long-term care event
- Factor the impact of IRMAA into your income and health care plans
Addressing memory decline and dementia

The number of Americans living with Alzheimer’s or other forms of dementia is growing rapidly, particularly among women. While there is no cure yet, recognizing the warning signs and active management can help reduce the impact.

Dementia and Alzheimer’s
Declining mental capacity may impact your or a family member’s independence in later years. Increasingly common, a dementia diagnosis can be financially devastating.

Following a dementia diagnosis

Alzheimer’s is the most common form of dementia, affecting over five million Americans, and the numbers are growing. Projections show that the condition is expected to impact 16 million Americans by the middle of this century.

Impact on women
Cognitive decline disproportionately impacts women, who make up nearly two-thirds of Alzheimer’s patients and represent 60 percent of the caregivers.

While there is no cure for dementia or Alzheimer’s yet, managing quality of life and protecting seniors requires recognition of the issue and a plan to take action.

After age 65
1 in 6 women will develop Alzheimer's28 versus 1 in 11 for breast cancer

Warning signs
Dementia can be tough to discern from simple memory lapses or forgetfulness as we age. Changes may be subtle and vague and increase slowly over long periods. Often changes in one’s ability to handle financial matters is an early indicator of a problem.

Experts list several warning signs that may signal its onset:
• Disorientation, getting lost even in familiar places and difficulty understanding spatial relationships
• Difficulty with everyday tasks like preparing a meal or balancing a checkbook
• Mood and personality changes or swings that impact social interactions
• Poor judgment with everyday tasks like dressing for the weather

Prevention management
Increasing evidence points to a possible ability to delay the onset of dementia or improve one’s ability to manage a decline. Scientists tell us that aerobic exercise, sleep, hygiene and cardiovascular factors all play a role.

Additionally, living with a purpose and learning new things later in life can help us build the brain like a muscle, increasing its capacity to respond to aging.

Protection the vulnerable from financial errors and abuse
Dementia or decreased mental capacity can lead to serious financial missteps and make seniors with dementia frequent targets of fraud and financial abuse. Warning signs include a sudden change in a financial or caregiver relationship, unfamiliar credit card transactions, unexplained money transfers or withdrawals, and changes in the mailing address for financial documents.

Prevention involves asking a family member or friend to review financial statements and transactions on a regular basis. It also includes providing your financial institution with a trusted contact, which helps facilitate discussions in cases where there is suspected fraud or a decline in judgment due to memory decline.

Once a diagnosis is made, a plan for protecting assets and safely transitioning financial and legal capacity should be put into motion.

Take action:
Understand the early warning signs of dementia, and be proactive

If you have concerns about your own or a family member’s ability to manage finances, contact the appropriate financial and legal professionals

Ensure loved ones have a power of attorney, an advance health care directive and a trust in place to address care and financial matters as the disease progresses

Update your financial plan to include additional funding and care needs
Retaining independence: Housing and care options

Where you spend your golden years is likely to change as you age, moving along a continuum of care options. Finding the right fit at each stage requires understanding the choices and their impact on your quality of life and care.

Aging in place

Even as independent and senior living facilities are booming, more and more people are choosing to stay in their homes and “age in place” for as long as possible.

Most seniors prefer to stay in their homes if they could no longer live on their own.

<table>
<thead>
<tr>
<th>Housing Option</th>
<th>Percentage</th>

<tr>
<td>Assisted living facility</td>
<td>17%</td>
</tr>
<tr>
<td>Move in with family member</td>
<td>8%</td>
</tr>
<tr>
<td>Nursing home</td>
<td>4%</td>
</tr>
</tbody>
</table>

While costs are certainly a consideration for many, others who choose to age in place may be simply taking advantage of flexible care and service options. Increasingly our service economy has scaled to meet the needs of our nation’s aging population.

Changing needs

While your retirement journey often begins in your current home, your evolving needs are likely to drive change over time.

Today’s seniors have a variety of choices when exploring new options, from independent senior living, shared living and assisted living all the way to skilled nursing facilities.

Identifying the right option at each stage requires recognizing how your needs are changing and balancing considerations like level of care, personal preference and costs.

Retaining independence: Housing and care options

<th>Housing Type</th>
<th>Cost Range</th>
<th>Description</th>
</tr>
</thead>
</table>
| Private residence                   | $1,500–$4,000 per month | A nursing home offers the highest level of care—and with it, the largest price tag. Stays at a nursing home can involve short-term issues like rehabilitation following a fall, or treatment for chronic and complex conditions, memory care, or end-of-life services. Care is delivered by licensed nurses available around the clock, with most facilities offering special memory care units for those with dementia and Alzheimer’s. Costs range from around $4,000 to $8,000 per month.
| Independent or assisted living community | $1,500–$4,000 per month | As you age you may find that you prefer help with day-to-day tasks like preparing meals, laundry or housekeeping. Eventually you may even require personal services like help with bathing and dressing. Today’s senior living communities offer options that can adapt as your needs change as well as deliver social outlets and structure to keep you active and engaged.
| Long-term care facility/nursing home | $1,500–$4,000 per month | Costs are largely impacted by size of residence and assistance required, but typical expenses are $1,500–$4,000 per month, with dementia or Alzheimer’s care offered at a significant premium above these rates.

Most seniors prefer to stay in their homes if they could no longer live on their own.
## Life stage checklist

Taking action can greatly affect your health outcomes at all stages of your life, helping you stay healthy, manage costs and protect your future.

Healthy best practices

Preparing for and funding your care as you age is one of the most important steps you can take in the wealth planning process, especially as you approach and live in retirement. While most investors are aware and concerned about the escalating cost of care, few have done anything about it. At RBC Wealth Management, your financial advisor is prepared to help you navigate important topics like health care and ensure your RBC WealthPlan reflects your preference for care and includes a realistic plan for funding your care.

Several best practices can help you stay on track:

**Focus on the big picture**
By capturing your goals for the future and applying metrics to track your progress, you will start to see the big picture more clearly. This should include a specific goal for health care that includes a realistic budget for your care and smart strategies to save for and fund your care in the future.

**Stay informed**
Planning for the future is not a one-time event. Your care needs will evolve over time, as will the health care landscape. It is important to be involved, stay informed and revisit your health plan on a regular basis. This means you must be diligent in actively managing your care and your plan as circumstances change.

**Manage risk**
Protecting yourself and your family requires anticipating issues and proactively addressing them before they arise. This means making informed decisions about your preference for care and funding that care as you age. This also includes having your will, health care directive and power of attorney current. Estate and insurance strategies can also play an important role in managing risk.

**Be ready to pivot**
As you age your health circumstances can change quickly, shifting priorities and objectives. This may mean adjusting your plan or changing course. The key is to stay nimble and work with an advisor who is informed and engaged and can help you navigate these turns in your journey.

At RBC Wealth Management, your financial advisor leverages smart tools, insights and resources combined with a proven goals-based planning process to help you clearly see your full financial picture and ensure you have confidence in a plan that prepares you for the challenges ahead. If you are interested in learning more about how you can take control of your health care in retirement, the process begins with a simple conversation.

About Wealth Insights

Your financial journey is informed by a clear understanding of both where you are today and the strategic options that can fuel your tomorrows.

At RBC Wealth Management we are committed to delivering insights that educate, equip and engage you for that journey.

An important component in delivering on that commitment is ongoing research on those already in retirement and those who are preparing.

In partnership with Ipsos, our most recent survey sought to understand perceptions and preparedness for health care in retirement. For this survey, a sample of 1,002 Americans aged 50+ from Ipsos’ online panel was interviewed online.

The results not only helped fuel this report, but also offer a glimpse into the realities of our changing world.
